Door entry by phone

aco

DOOR ENTRY SYSTEMS

Meet **acoGO!**

Thanks to this modest unit that connects your smart phone to your door entry system via a friendly app, you achieve more for less effort. You have no need to be at home in order to talk via your door entry system. You do not even have to go to the door to let your guests in.

acoGO! WiFi and acoGO!

With **acoGO! Wifi** and **acoGO!** you can take door entry system calls on your smart phone, and they are designed to be wall mounted. They are compatible with Familio / Como, Inspiro and CDN, working under the P system (P and PV). Their greatest advantage is that any user of a digital ACO door entry system can buy and install one. It can also be used as an internal unit.

acoGO! DIN

This special module, mountable on a DIN rail, is the easy way to take door entry system calls on your phone.

acoGO! DIN can also connect via VOiP through a third party provider - directly to standard phone numbers.

This solution is intended for ACO products from the Familio / Como group that use the PRO or PRO-A standard.

Similarly to other **acoGO!** products, it allows the phone to be used as part of a door entry system.

Choose the **acoGO!** version that is the best fit for your needs:

acoGO! WiFi	acoGO!	acoGO! DIN
		
Commercial index: GO! P-IP WIFI	Commercial index: GO! P-IP	Commercial index: GO! PRO-A-IP DIN
