**DOOR ENTRY
SYSTEMS
MANUFACTURER**

WE'RE INSPIRED BY THE EVERYDAY...

... which is why we always remember that our devices are "tested" each day by millions of users. People living in both big cities and small towns, in detached houses or tenements, office and factory workers. We know that the entry system is often a building's calling card, helping to make that all-important first impression.

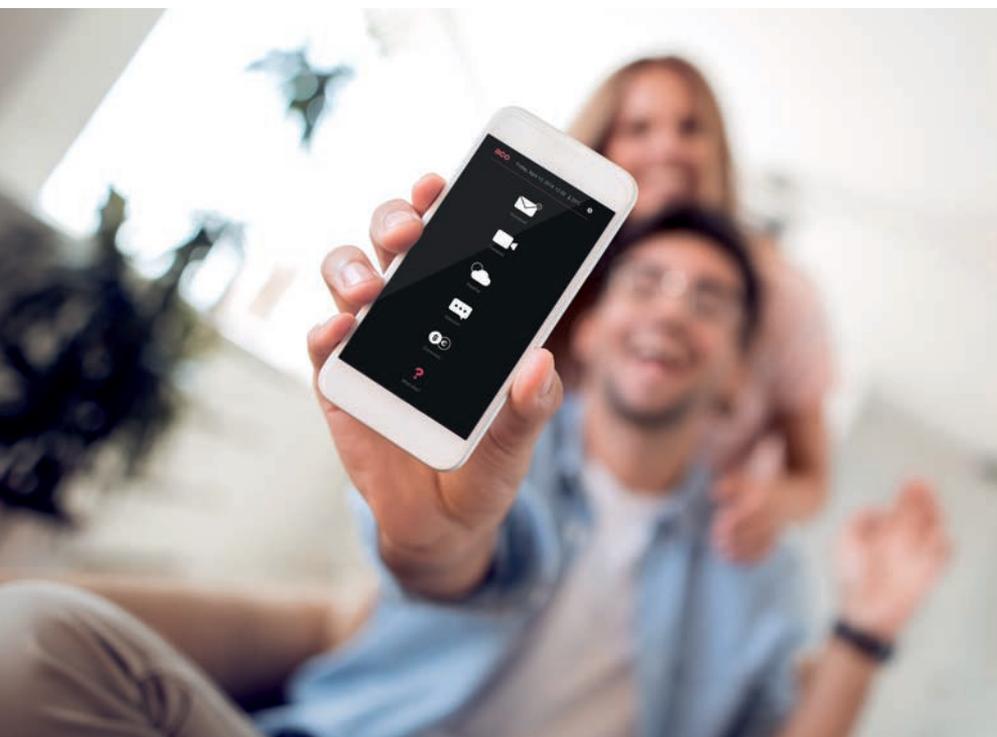

This is why we want every user of an ACO entry system to enjoy not only its functionality and reliability, but also its friendly and interesting design.

We have tried to introduce a little inspiration into simple, everyday activities such as entering or leaving a building, thanks to innovative solutions not used by other manufacturers.

We are aware that in a device as small as a door entry system, even the slightest detail is important. We devote time and energy to each of them, so that our well thought-out solutions cover everything that our customers really need.

WHY? BECAUSE WE ALWAYS PUT PEOPLE AND THEIR DAILY COMFORT FIRST

People from different countries and different groups can have different needs. We observe them carefully, seeking the solutions that work best in specific conditions.

For the elderly, the disabled and children, it can be difficult to climb stairs or open and shut a heavy door – everyday actions which we barely notice can cause a lot of trouble. Our aim is to design devices which will break down as many barriers as possible in the entrance area.

LOCAL ROOTS, EUROPEAN HORIZON

As a family firm originating in Poznań, we are proud that ACO's secure entry systems are known and valued by Polish users, and are becoming increasingly common in London, Berlin, Paris and Vienna.

Even though we have over 20 years' experience in producing innovative devices, which make the lives of millions easier, door entry systems are still our passion. And as the number of satisfied ACO customers grows, so does our feeling of responsibility for the highest quality and functionality, as well as the intriguing design of our products.

Working not only for ourselves, but also for subsequent generations, we make bold, conscious choices. Our ambition is to continue to seek new roads and new opportunities – by our own strength, in our country, in Poznań...

OUTSIDE UNITS

Daily / CDN

DAILY INSPIRO+

The brand's core product is **ACO Daily** which, as the name suggests, meets the everyday requirements. And these are far from trivial, if you consider that the entry system in a large block of flats is used hundreds of times a day. Both of the **ACO Daily** lines – **Inspiro+** and **COMO** – feature minimalist design, with brushed stainless steel panels, intended mainly for multi-family residential buildings. They work with different types of outside units – from glass video monitors to classic earphone solutions. They are available in video and audio versions, and can also operate domestic automation.

Inspiro+ is an extended system dedicated to multi-family residential buildings, ideally suited to both the investment market and for modernisation of properties. It can serve 1020 apartments.

DAILY COMO

COMO, on the other hand, is better for buildings housing one or a few families, serving from 1 to 256 apartments.

The latest addition to ACO's family is the IP system – this is currently a key solution in the entry systems industry. In the past few weeks we have completed work on our own beta version, and are currently working on developing further functionalities. The current version of **COMO IP** is intended for single-family residences, but subsequent versions will also be available for multi-family buildings.

 All ACO devices can be expanded to include solutions dedicated to people with disabilities.

INSIDE UNITS

Glass / Touch / Basic

CDN

The story of ACO entry systems began with the **CDN** line, which earned acclaim on the Polish market as a series of durable devices, reliable and impervious to difficult atmospheric conditions and acts of vandalism. For many years now, fitters and users have appreciated **CDN** for its intuitiveness, ease of use and wide range of configurations.

When designing inside units, we always bear the users' needs in mind. We look for both optimal functionality and form. This is why, our handset units contain magnets which enable them to be hung up more easily. This is why, we produce inside units without headphones, which can in time be made in video versions. This is why, we are the producer of the first glass monitor on the Polish market. But that's not all...

PRODUCTION

ACO is a manufacturer of electronic devices with over 20 years' of experience. We know every step of the production process inside out, we possess the knowledge and tools to provide all-round support for our partners – from the electronic and aesthetic design, through production and assembly, right up to packing and timely delivery. As part of the services we provide, we can also design and print information and advertising materials.

Door entry systems are our passion and speciality, and this is the field where we can give the most support. For us, what matters is flexibility, the creation of dedicated solutions and reacting quickly to our customers' needs.

Most of the 70 people employed at ACO are highly experienced professionals. They are supported by the R&D staff – young, but already experienced in their field. We have put our trust in their familiarity with innovative technologies and awareness of the challenges which will face us in the future.

The production process is managed and realised in the same place, which means that the quality of our solutions is consistently high, and ACO products are renowned for their reliability and durability. You are welcome to come and visit our factory in Poznań, a mere 270 km from Berlin and 780 km from Frankfurt.

THE COMPANY'S POTENTIAL:

- ↗ R&D
 - ↗ production
 - ↗ restrictive quality control procedures
 - ↗ warehouse
 - ↗ customer service department
 - ↗ marketing department
-

INJECTION MOULDS

ACO has advanced equipment for creating injection moulds and an extensive injection moulding department. This is operated by specialists, who can help our customers out with their knowledge and experience at any time. Our modern toolroom and machine park can achieve a precision of up to 0.001 mm.

➤ We invite you to visit our factory, located in Poznań, only 270 km from Berlin and 780 km from Frankfurt.
